**Hank Heron keeps guard over Seminole County Waterways.
Join him and become a “Water Guard” today.**

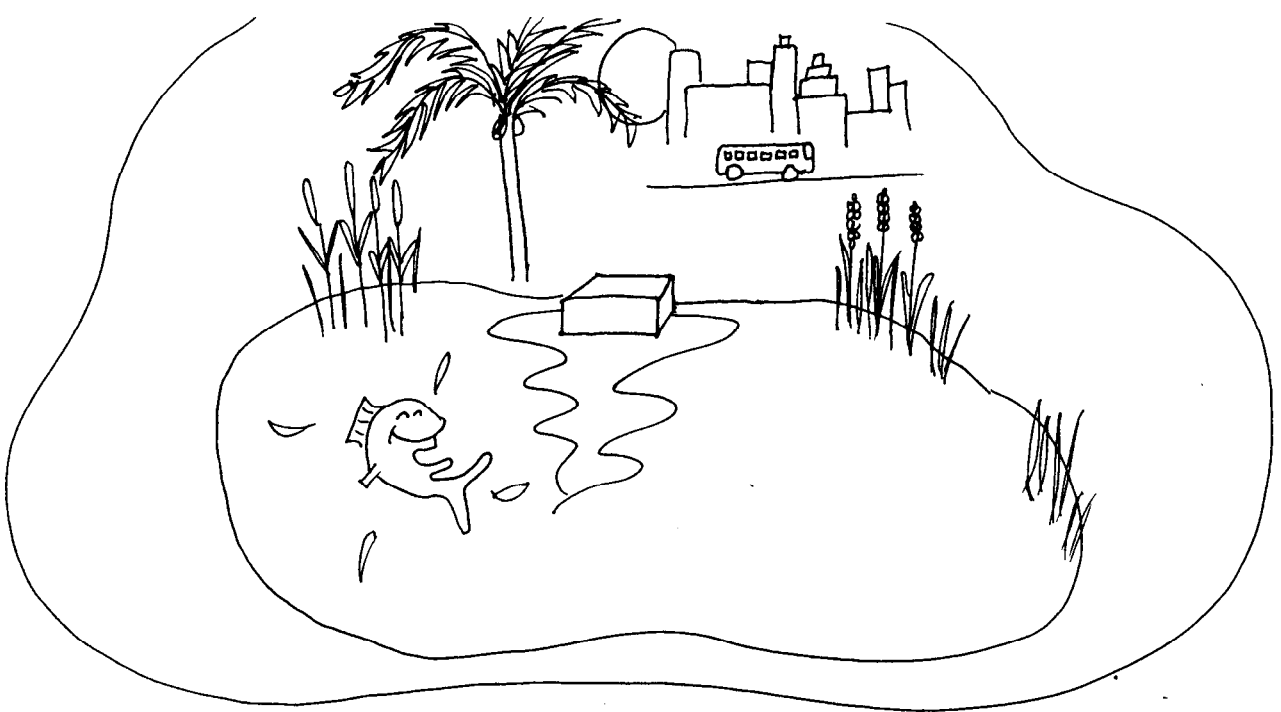

Hank Heron knows these raindrops will find their way into nearby lakes and streams. This is where the journey begins . . .

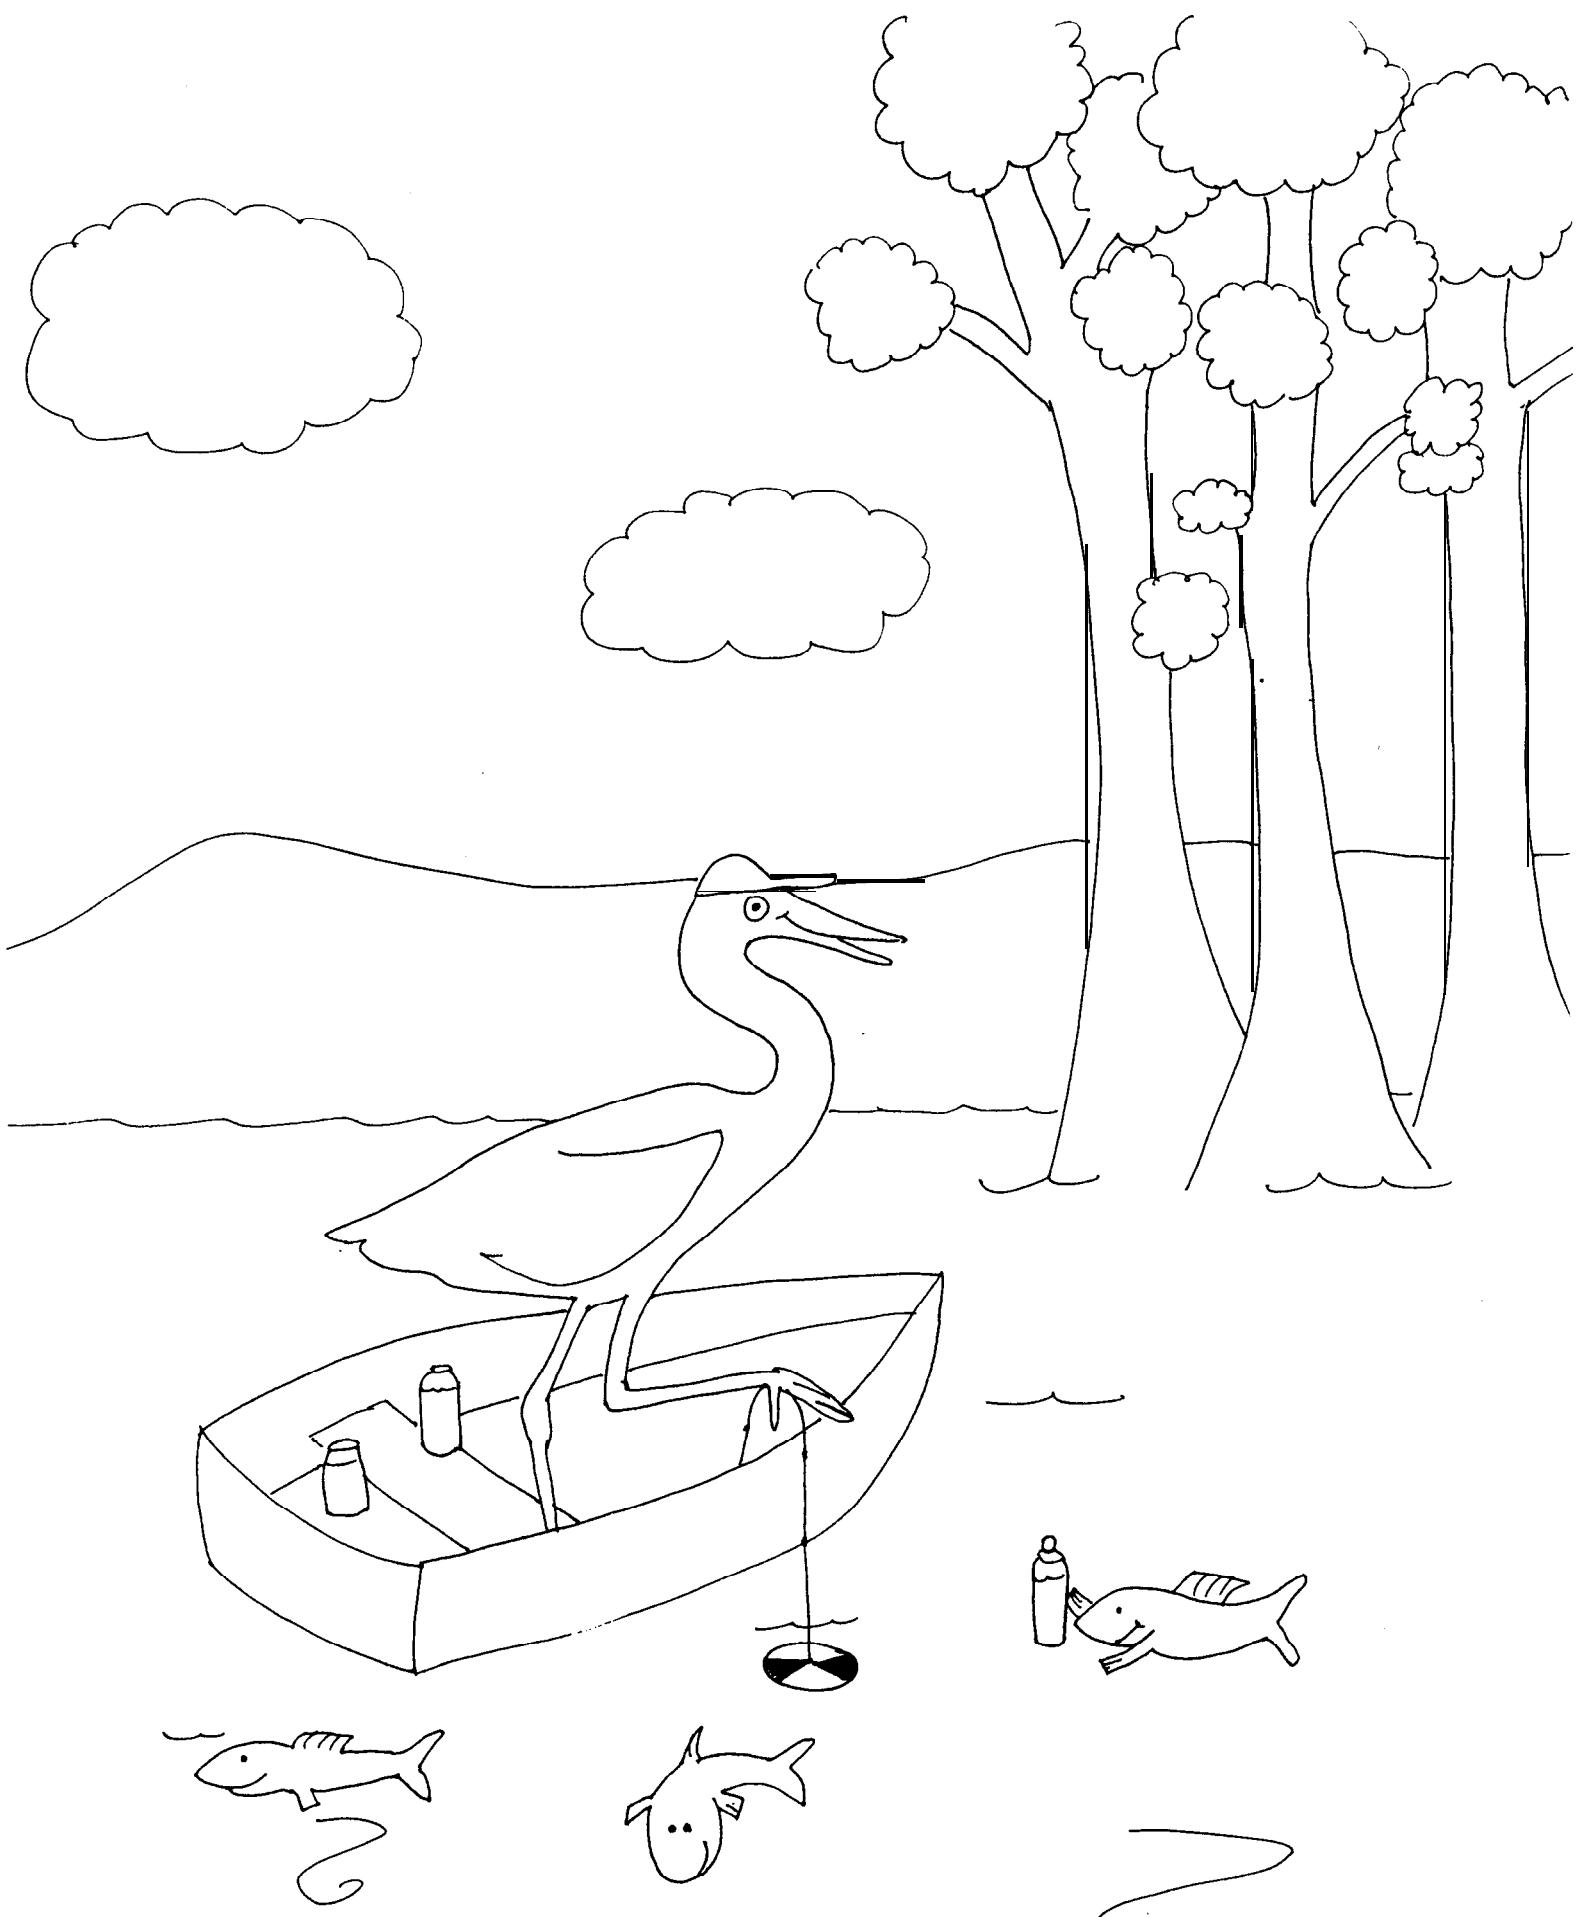

As the raindrops flow across the ground, they pick up dirt, chemicals and garbage. These things cause pollution in our streams and lakes. Keep it CLEAN!

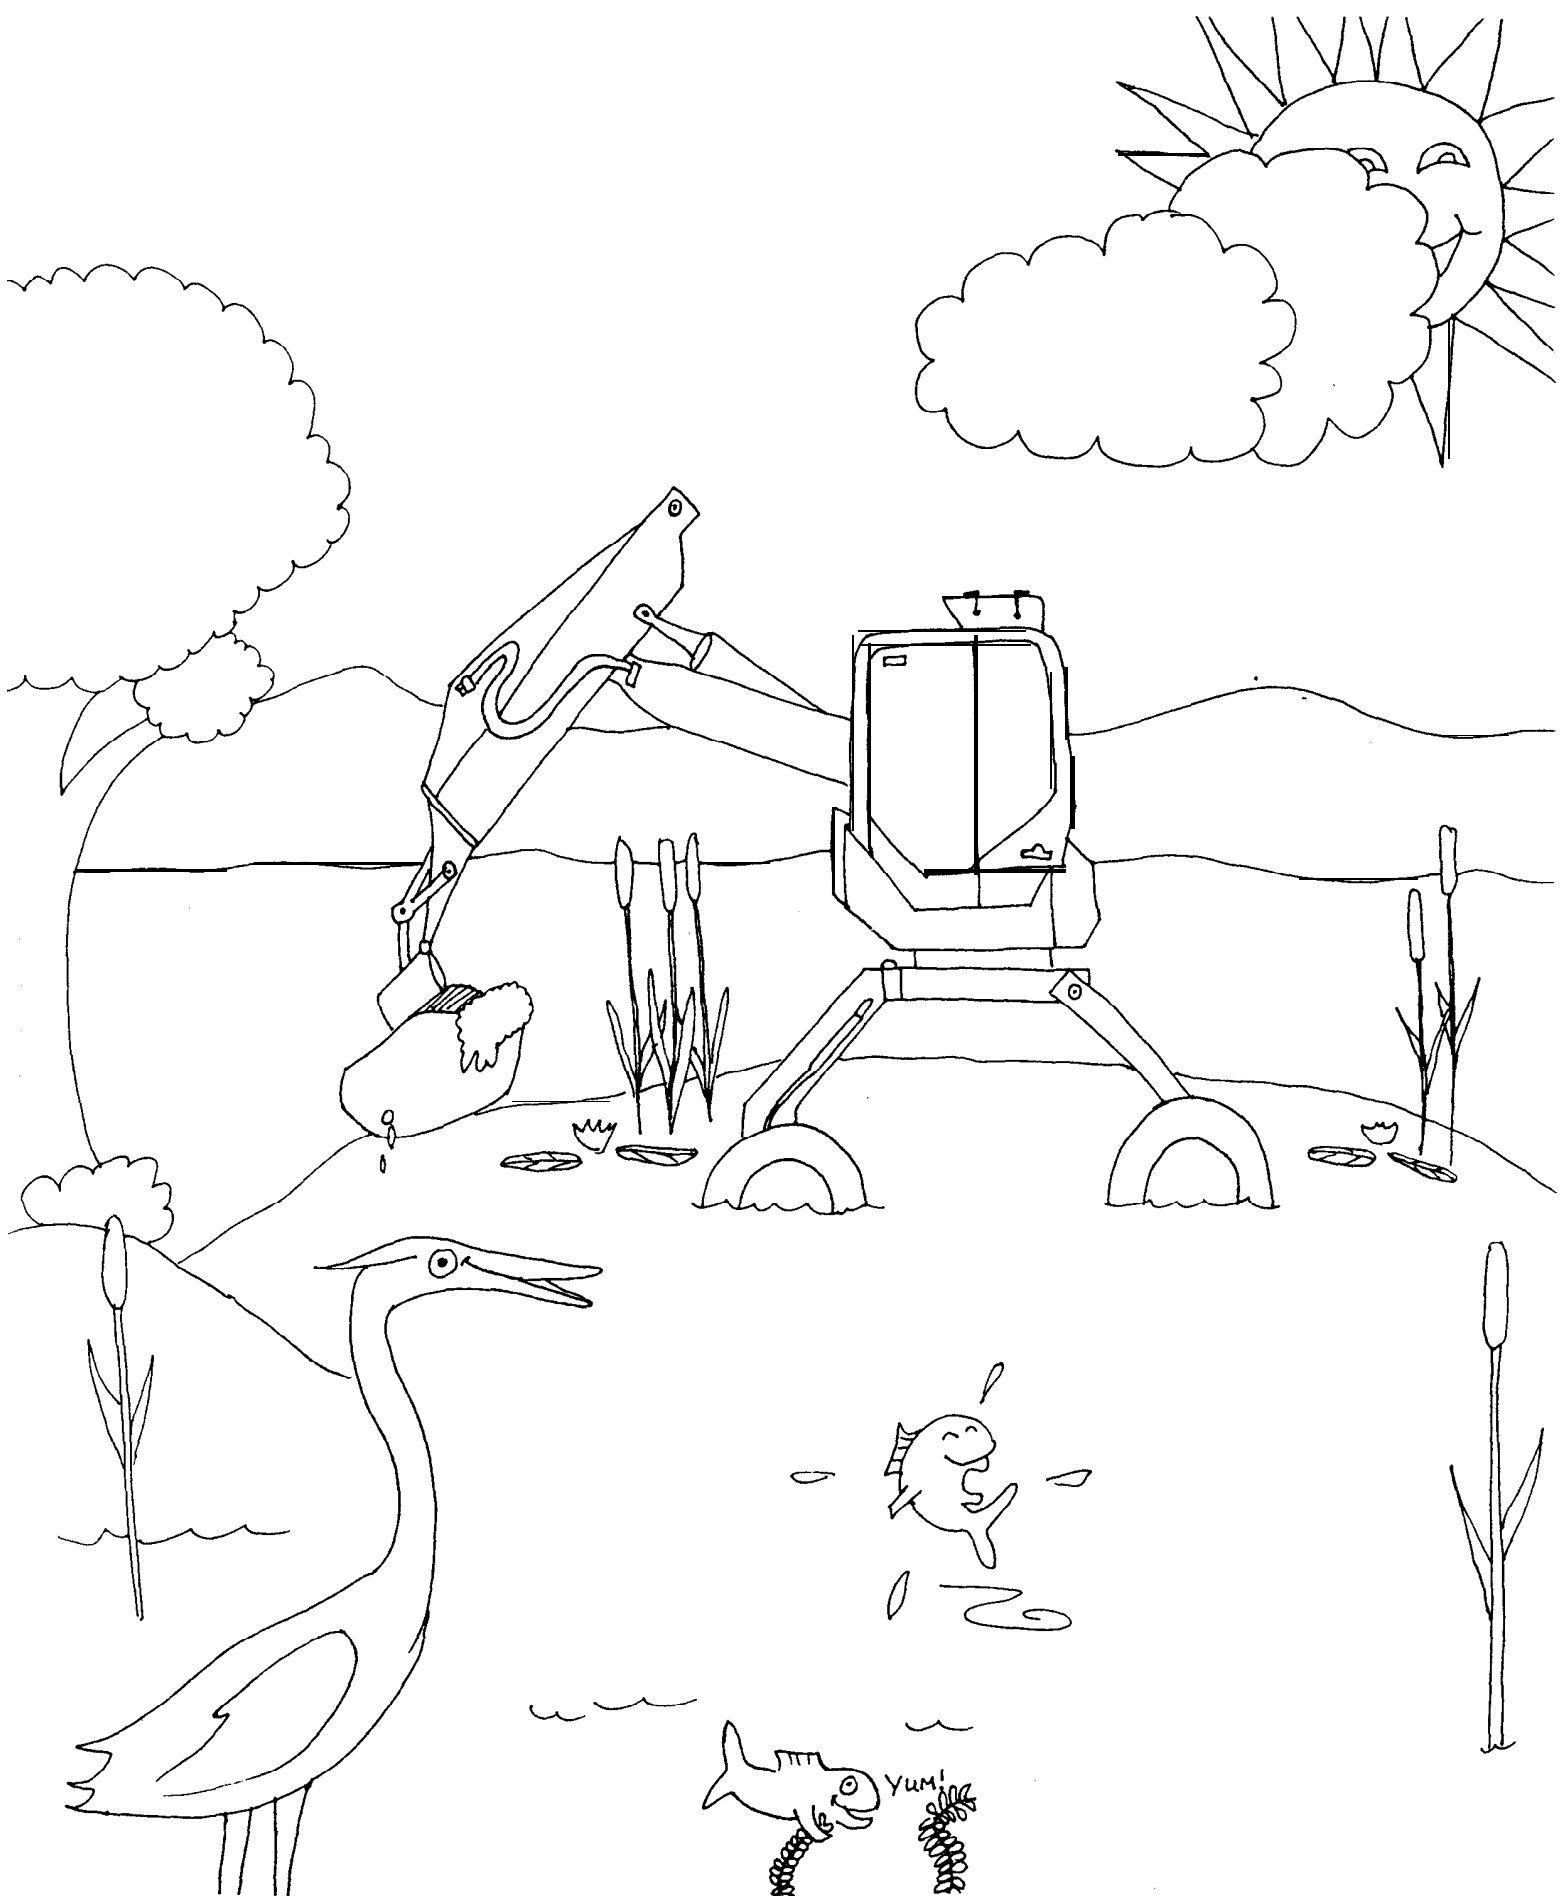

If it rains enough **and** the water cannot drain it causes flooding.

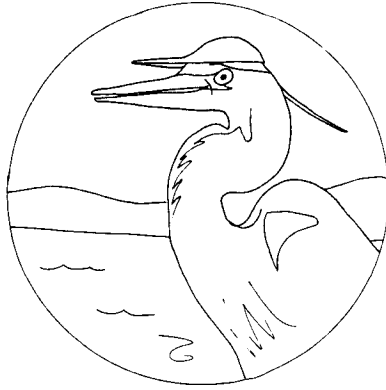

Hank Heron, the Engineer, thinks of ways to collect rainwater to prevent flooding and make it cleaner.

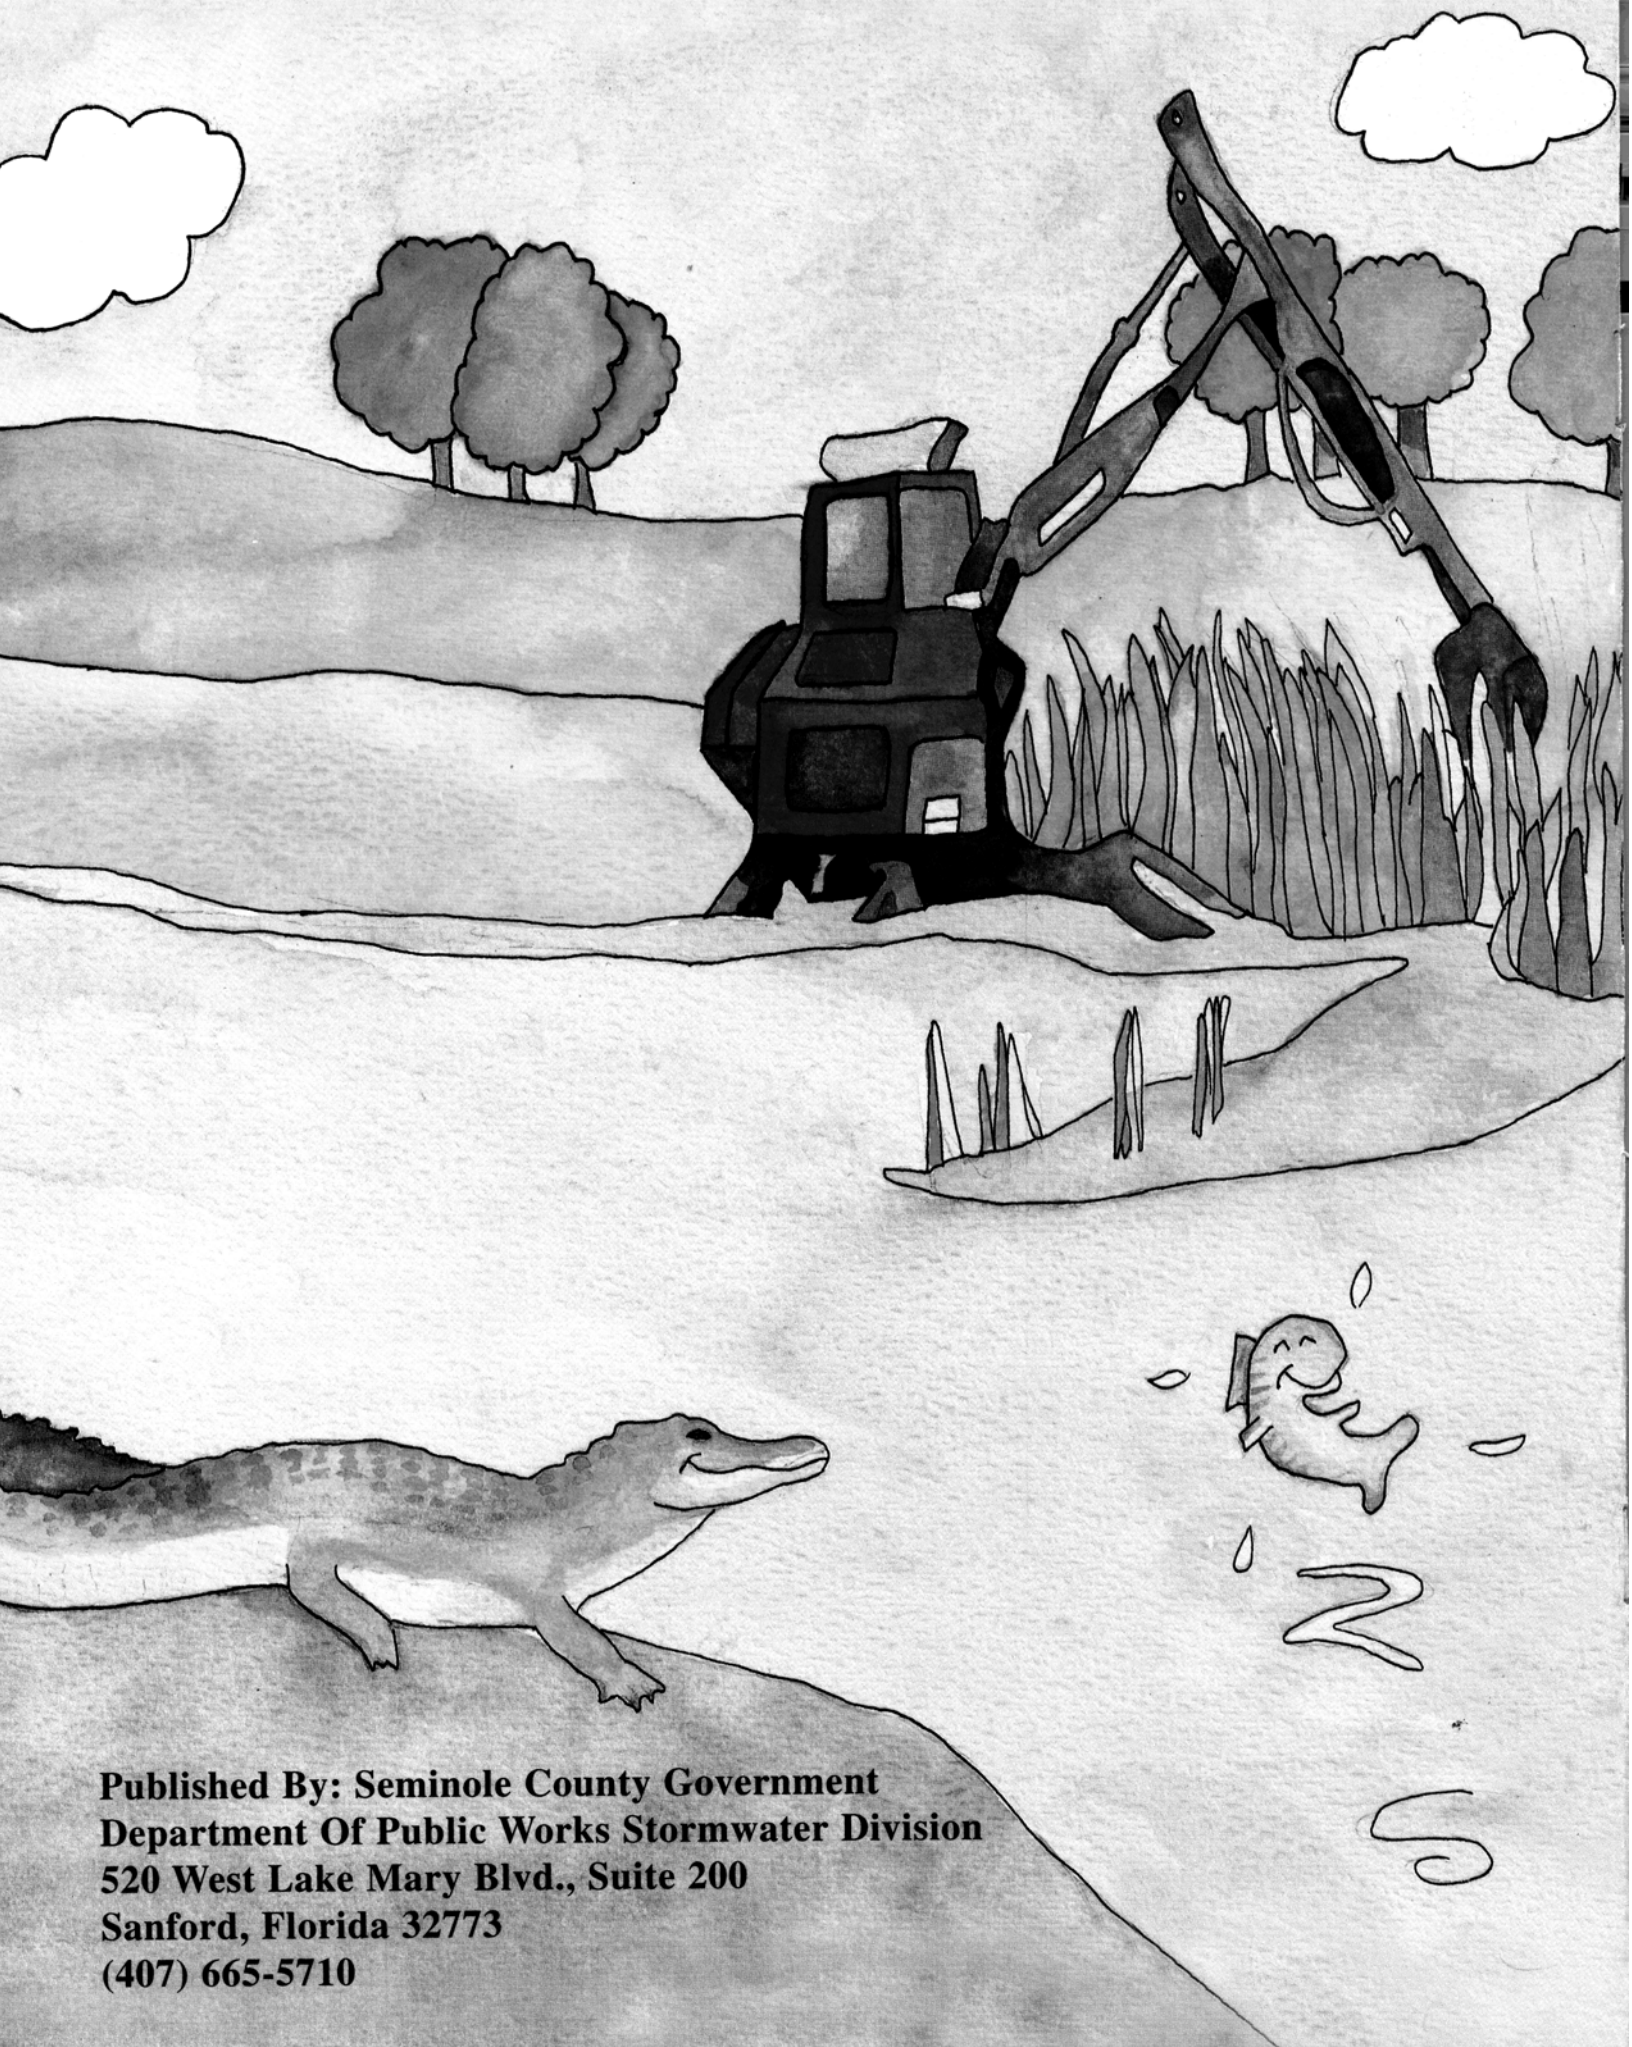

Hank Heron, the Environmental Specialist, takes water samples from his neighborhood lake and measures the quality. He noticed an improvement in the lake since the retention pond was built nearby.

Hank Heron watches Carl Carp eat the hydrilla (a pest plant) and the machine (Swamp Gator) clean sediment out of his pond. Together this Stormwater Team will help make Seminole County a nicer place to live.

Hank Heron needs your help. Draw a picture or make a list below of things you can do to help stop pollution in our lakes and streams.
