Free Water Clinic: SHOWERS OF SAVINGS

This is Joan.

Once a day she takes a 20-minute shower that uses 50 gallons of water or 350 gallons a week.

This is Joan's grass.

Twice a week Joan gives her grass a 1 inch shower. It uses 1,246 gallons a week or about 25 showers.

If Joan waters her yard at the recommended 1/2 inch instead of 1 inch, she'll **save 623 gallons** each week. That's close to two weeks' worth of Joan's showers!

If Joan waters at 1/2 inch and she installs "smart irrigation technology" her irrigation will turn off during and after rainfall events. On average this **saves 872 gallons a week** or **17 showers**. Over the year she can **save 45,344 gallons** of water.
