Seminole County 2045 Transportation Mobility Plan  
Existing Conditions & Future Traffic Forecast Technical Memorandum

---

## 1. Introduction

This memorandum describes and analyzes the existing conditions of traffic capacity and travel time and delay within Seminole County (hereinafter, "the County"). It also includes the traffic forecast for 2030, 2035, and 2045 with a discussion of overall future conditions of the roadway network within the County. Included in this document are the background of the traffic capacity analysis process, the description of the Central Florida Regional Planning Model (CFRPM), existing conditions (2022) traffic analysis, future-year analyses including 2030, 2035, and 2045, and a further discussion of the future-year roadway deficiencies. All supporting data are provided in the appendixes.

Data sources used to evaluate the travel time and delay and existing traffic capacity and to identify future deficiencies came from the CFRPM, the County and its seven cities, MetroPlan Orlando, and Florida Department of Transportation (FDOT).

## 2. Traffic Capacity Analysis

### 2.1 Methodology

A traffic-count-based analysis was conducted using the traffic count data and forecasted traffic count data that was generated from the CFRPM, Version 7. The existing conditions data for 2022 were available as part of the Traffic Counts GIS layer that is provided on the Seminole County website (Seminole County n.d.). The future-year volumes for 2030, 2035, and 2045 were forecasted as part of the CFRPM output. These forecasted traffic volumes are included as part of Appendix A, Existing Conditions and Future Forecasted Level of Service and Volume to Capacity Tables.

Both analyses for the existing and future-year conditions were conducted based on traffic capacity using actual and forecasted traffic counts to generate a level of service (LOS) and volume to capacity (V/C) ratio for each roadway segment analyzed. The LOS scale represents a qualitative assessment of the traffic conditions with an assigned grade based on several traffic-related factors that are represented by different letters. The V/C ratio is a quantitative assessment of the traffic conditions based on number of vehicles in relation to the capacity of the roadway segment.

For this *Existing Conditions and Future Traffic Forecast Technical Memorandum*, capacity analysis summaries were provided for existing (2022), 2030, 2035, and 2045 planning horizons. The facilities summarized are only the facilities with a future deficiency (LOS F) in 2045. All future deficient facilities are included as a way to prioritize improvements based on the need for improvements over the planning horizons.

### 2.2 Operating Standards

The Generalized Service Volume Tables from the FDOT 2020 *Quality/Level of Service Handbook* (FDOT 2020) were used as a basis for the LOS determinations. The FDOT Generalized Service Volume tables are specified per facility type and area type. Adjustments were made for County facility capacities based on the *Seminole County Comprehensive Plan Transportation Element* (Seminole County n.d.), which determined roadway specific thresholds for capacity that were adhered to in determining capacity deficiencies.

### 2.3 Volume to Capacity Ratios

The V/C ratio is a comparison of the measured volume of traffic on a roadway in relation to the capacity of the roadway. This value represents the usage of a facility and is an effective way to identify capacity improvement needs. Prioritization of improvements can also be made based on the magnitude of the V/C ratio. Maps 1 through 4 represent the Countywide ratios for facilities at 0.95 and greater for 2022 (existing), 2030, 2035, and 2045, respectively (refer to Appendix B, Volume to Capacity Ratio Maps).

The maps are color-coded as follows:

- Yellow represents those facilities that are within 5% or at capacity, with V/C ratios between 0.95 and 1.00.
- Orange represents those facilities that are above capacity from 1 to 30%, with V/C ratios between 1.01 and 1.30.
- Red represents those facilities that are over capacity by greater than 30%, with V/C ratios higher than 1.30.

### 3. Central Florida Regional Planning Model

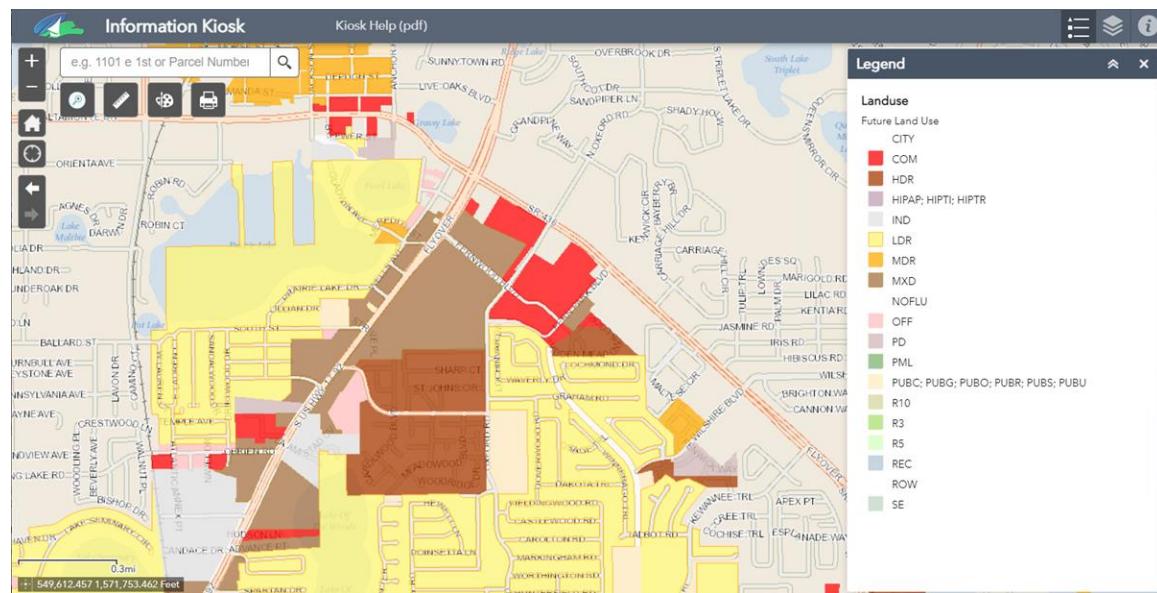

#### 3.1 General Overview

The CFRPM is an FDOT-provided resource for traffic modeling within the nine-county FDOT District 5 area, which includes Seminole County. Input for the model is gathered from multiple municipal and commercial sources to make the model as robust as possible. Version 7 of the CFRPM is the officially adopted model for all five of the Metropolitan Planning Organizations in FDOT District 5, including MetroPlan Orlando, which services Seminole, Orange, and Osceola Counties. The model has a base year of 2015 and a 2045 horizon year with 5-year interim horizons. The CFRPM was developed with Bentley CUBE Voyager. The Caliper TransCAD version is scheduled to be adopted in December 2022 starting with CFRPM Version 7.2.

#### 3.2 Applicability of the Model

CFRPM Version 7 is largely consistent with the Seminole County Comprehensive Plan Future Land Use Element. The land use data for future projects has been distributed into Traffic Analysis Zones (TAZs) that represent the socioeconomic characteristics of a given location. This has been done in a manner that is in line with the Seminole County Future Land Use Map. However, in some cases, there are some TAZs that do not include new developments as shown on Figure 3-1 because no change in population data is expected.

Figure 3-1. Future Land Use Map – Development, Traffic Analysis Zone 7077

For example, in the case of TAZ 7077, the 2045 socioeconomic data are nearly the same as the 2015 socioeconomic data. Table 3-1 shows the comparison of the 2015 and 2045 residential parameters data. There is no change in the population data, and the data are consistent with the Future Land Use Map shown as Figure 3-1.

Seminole County 2045 Transportation Mobility Plan  
 Existing Conditions & Future Traffic Forecast Technical Memorandum

---

**Table 3-1. Traffic Analysis Zone 7077, Comparison of 2015 and 2045 Residential Parameters**

TAZ	YEAR	Single-Family Dwelling Units	Single-Family Population	Multi-Family Dwelling Units	Multi-Family Population	Total Population
7077	2015	0	0	272	582	582
7077	2045	0	0	272	582	582
				0%	0	

Table 3-2 shows the comparison of the 2015 and 2045 hotel, industrial, commercial, and service parameters data. There is only a relatively small change in the employment data, though the Future Land Use Map shown as Figure 3-1 depicts a more significant shift in land use for these purposes.

**Table 3-2. Traffic Analysis Zone 7077, Comparison of 2015 and 2045 Hotel, Industrial, Commercial, and Service Parameters**

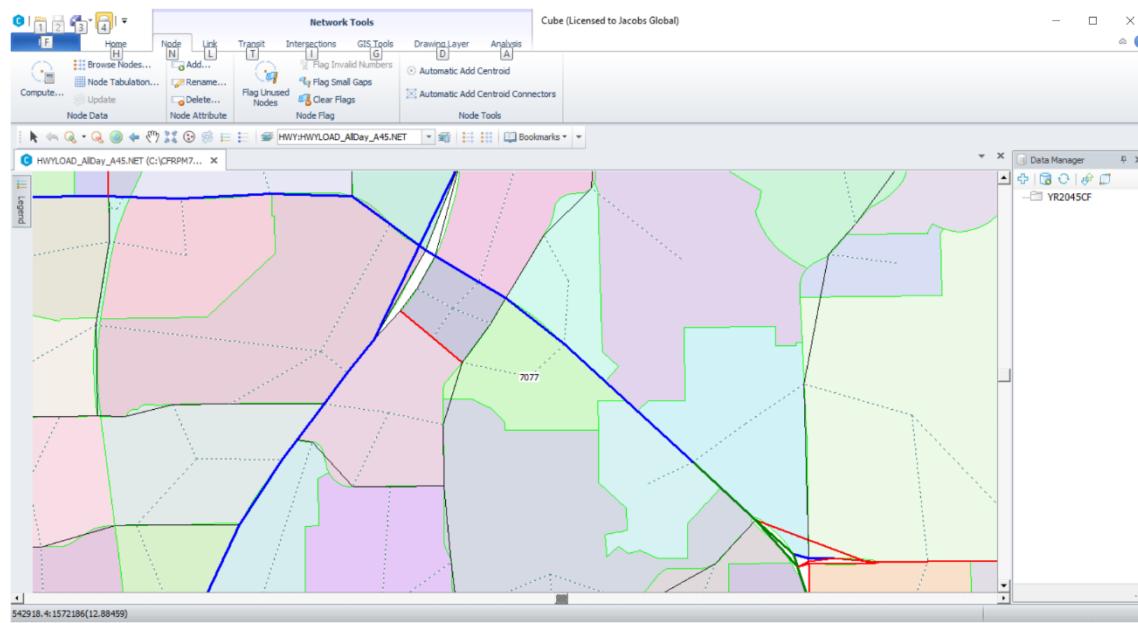

TAZ	YEAR	Hotel and Motel Dwelling Units	Hotel and Motel Percent Occupancy	Hotel and Motel Population	Industrial Employment	Commercial Employment	Service Employment	Total Employment
7077	2015	0	0	0	1	255	589	845
7077	2045	0	0	0	1	262	608	871
					3.1%	26		

Only a nominal commercial land use increase has been included in the CFRPM despite the increase in commercial development that is indicated on the Future Land Use Map. Figure 3-2 shows the view of TAZ 7077 from the CFRPM display for reference.

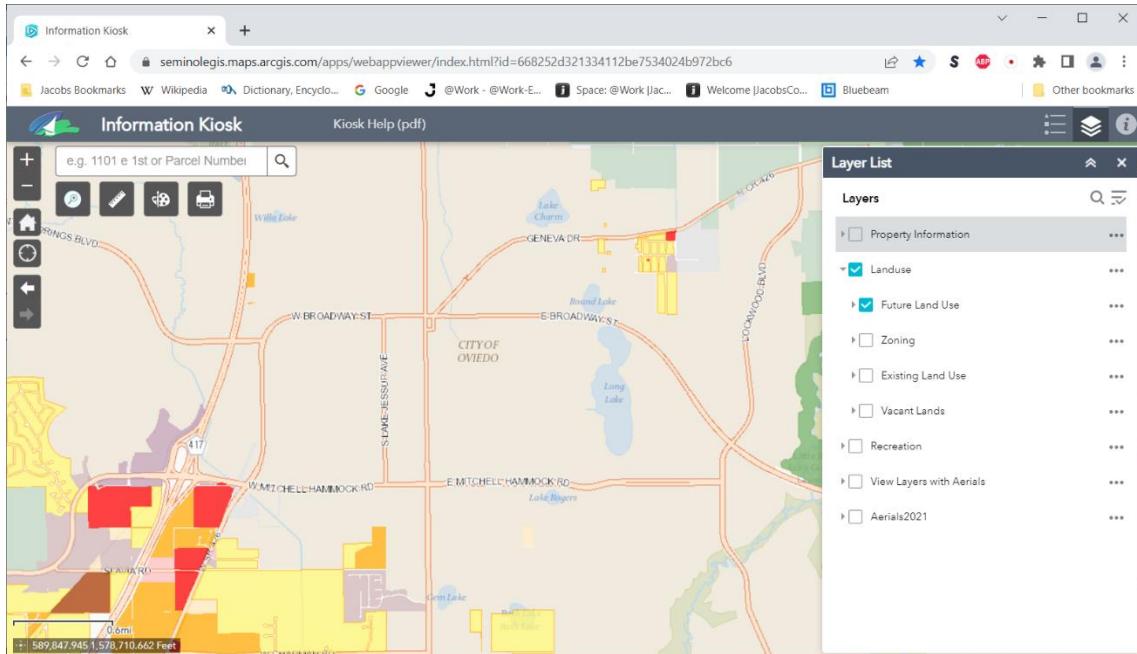

There are also several TAZs that include new development in the CFRPM, even with no new development indicated on the Future Land Use Map. New land use data were included in the CFRPM. An example of this is represented in the TAZ shown on Figure 3-3, which also shows that there was no new development in TAZ 7191 per the Future Land Use Map.

Seminole County 2045 Transportation Mobility Plan  
Existing Conditions & Future Traffic Forecast Technical Memorandum

**Figure 3-2. Central Florida Regional Planning Model (CFRPM), Version 7 – 2045, Traffic Analysis Zone 7077**

**Figure 3-3. Future Land Use Map – Development, Traffic Analysis Zone 7191**

Seminole County 2045 Transportation Mobility Plan  
Existing Conditions & Future Traffic Forecast Technical Memorandum

---

Table 3-3 shows an increase in residential parameters in TAZ 7191, though there was no future development indicated within the zone on the Future Land Use Map.

**Table 3-3. Traffic Analysis Zone 7191, Comparison of 2015 and 2045 Residential Parameters**

TAZ	YEAR	Single-Family Dwelling Units	Single-Family Population	Multi-Family Dwelling Units	Multi-Family Population	Total Population
7191	2015	124	342	402	986	1,328
7191	2045	168	463	804	1,970	2,433
						83.2% 1,105

Table 3-4 shows a more than 500% increase in hotel, industrial, commercial, and service parameters in TAZ 7191. The increase comes from the employment increases in the zone, which are not represented on the Future Land Use Map,

**Table 3-4. Traffic Analysis Zone 7191, Comparison of 2015 and 2045 Hotel, Industrial, Commercial & Service Parameters**

TAZ	YEAR	Hotel and Motel Dwelling Units	Hotel and Motel Percent Occupancy	Hotel and Motel Population	Industrial Employment	Commercial Employment	Service Employment	Total Employment
7191	2015	0	0	0	56	37	324	417
7191	2045	0	0	0	88	579	1,931	2,598
								523% 2,181

Figure 3-4 shows the view of TAZ 7191 from the CFRPM display for reference.

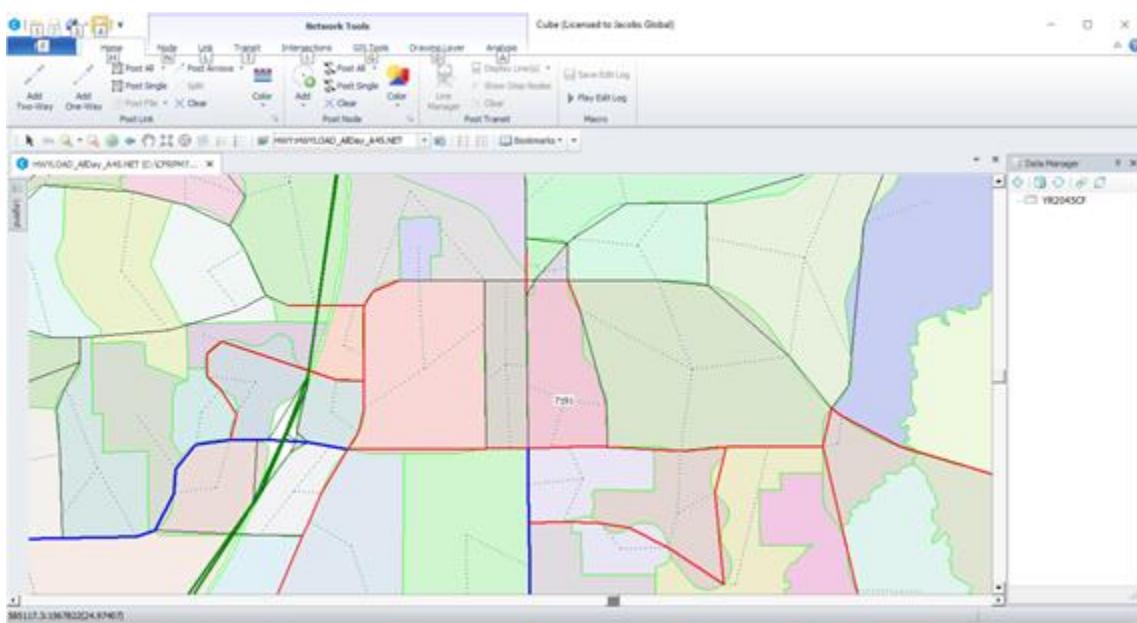

Centroid connectors connect the land use data contained in a TAZ to the roadway network. Also noted in the analysis of the CFRPM, the centroid connectors have not been changed from the 2015 base year network (as part of the CFRPM) to the 2045 cost feasible network. This indicates that if any new access points are planned as part of future development, they may not be correctly represented in the 2045 model because they are built on the base year network.

Overall, the differences between the Future Land Use Map and the CFRPM are do not affect the analysis at a Countywide level but should be considered where major redevelopment is proposed in the future.

## 4. Existing Conditions Traffic Analysis

### 4.1 Travel Time and Delay Study

This section summarizes a portion of the existing conditions (2022) traffic analysis that was conducted with travel time and delay data. This analysis assumes that the effects of the COVID-19 pandemic have subsided, and 2022 traffic conditions represent typical conditions. The travel time and delay data were provided by the County in the form of a report that summarizes the 2022 conditions on a directional and peak hour basis (Luke Transportation Engineering Consultants 2022). The study analyzed data for a total of 342.6 miles of roadways in the County. Included in the total mileage were 8 state roads that totaled 134.4 miles and 74 County roads that totaled 208.2 miles.

Determining the LOS on a roadway segment for the 2022 Seminole County Travel Time and Delay Study followed FDOT guidance of a two-tier, average-travel-speed-based LOS, which differs from capacity-based LOS. The tiers define LOS grades based on higher posted speeds of at least 40 miles per hour and lower posted speeds of no greater than 35 miles per hour. For this analysis, roadway segments with an LOS F were reviewed. That data are included as Appendix C, Travel Time and Delay Study – LOS F Segments.

The analyzed roadway segments with a traffic control device present at the downstream end of the segment were assumed to have its LOS be influenced by the traffic control device. These intersections are recommended to be further analyzed and considered as needs to improve the intersection roadway conditions.

Roadway segments without traffic control devices were compared to those segments in the capacity analysis. This was conducted to demonstrate which roadway segments were identified in both the travel time and delay and capacity analyses. Those roadway segments that were identified only by the travel time and delay analysis are recommended to be further analyzed and considered as needs to improve roadway conditions.

Direction of travel for all locations were abbreviated as part of the analysis as follows:

- EB = eastbound
- NB = northbound
- SB = southbound
- WB = westbound

#### 4.1.1 County Roads: Signalized Intersection Approaches with LOS F

County signalized intersection approaches that operated as an LOS F based on the travel time and delay are listed in the following text. The 70 signalized intersection approaches listed represent 26 facilities and 58 intersections. These locations are recommended to be reviewed for intersection improvements with the goal of improving traffic conditions.

1. Airport Boulevard/MLK Jr. Boulevard EB at CR 46A/25th St.
2. Airport Boulevard/MLK Jr. Boulevard WB at CR 46A/25th St.
3. Airport Boulevard/MLK Jr. Boulevard WB at Old Lake Mary Rd.

#### **4.1.2 County Roads: Stop-Controlled Intersection Approaches with LOS F**

Two of the County stop-controlled intersection approaches analyzed as part of the travel time and delay were identified with an LOS F. The locations were on different Seminole County facilities and are listed in the following text.

1. CR 431 SB at CR 46A
2. Tangerine Avenue NB at Citrus Ave.

#### **4.1.3 County Roads: Roadway Segments with LOS F**

County roadway segments operating at an LOS F based on the travel time and delay were compared to that of the capacity analysis for existing and future conditions. Only one of the eight roadway segments were identified as needing improvements based on capacity through the planning period of 2045: Longwood Lake Mary Rd. between CR 427 and Joyful Blossom Pl. All of the following roadway segments are from different County facilities:

1. Central Pkwy. WB – Palm Springs Dr. to One Center Blvd.
2. CR 46A EB – US 17/92 to Grenada Ave.
3. Greenway Boulevard EB – Lake Emma Rd. to Greenford Dr.
4. Greenwood Boulevard EB – Lake Emma Rd. to Donegal Ave.
5. Lake Emma Road NB – Longwood Hills Rd. to Danbury Rd.
6. Longwood Lake Mary Road – CR 427 to Joyful Blossom Pl.
7. Pearl Lake Causeway NB – Bunnell Rd. to N/S Pearl Lake Cswy.
8. Sanford Avenue SB – 1st St. to 6th St.

#### **4.1.4 State Roads: Signalized Intersection Approaches with LOS F**

State signalized intersection approaches operating at an LOS F based on the travel time and delay are listed in the following text. The 45 signalized intersection approaches listed represent 6 facilities and 38 intersections. These locations are recommended to be reviewed for intersection improvements to improve traffic conditions.

1. SR 414 WB at Magnolia Holmes Rd.
2. SR 426 EB at Deep Lake Rd.
3. SR 426 EB at Hall Rd./Howell Branch Rd.
4. SR 426 EB at Red Bug Lake Rd./ Mitchell Hammock Rd.
5. SR 426 EB at SR 434
6. SR 426 WB at Hall Rd./Howell Branch Rd.
7. SR 426 WB at Red Bug Lake Rd./Mitchell Hammock Rd.
8. SR 426 WB at SR 417 (E. Ramps)
9. SR 434 EB at SR 436
10. SR 434 EB at Tuskawilla Rd.
11. SR 434 EB at US 17/92
12. SR 434 EB at Wekiva Springs Rd./Montgomery Rd.
13. SR 434 WB at CR 427/Ronald Reagan Blvd.
14. SR 434 WB at I-4 (E. Ramps)
15. SR 434 WB at Mitchell Hammock Rd.
16. SR 434 WB at Montgomery Rd./ Wekiva Springs Rd.
17. SR 434 WB at Raymond Ave.
18. SR 434 WB at SR 436
19. SR 434 WB at US 17/92
20. SR 436 EB at Balmy Beach Dr.
21. SR 436 EB at CR 427/Maitland Ave.
22. SR 436 EB at Hattaway Dr.

#### **4.1.5 State Roads: Stop-Controlled Intersection Approaches with LOS F**

None of the state stop-controlled intersection approaches analyzed as part of the travel time and delay were identified with an LOS F.

#### **4.1.6 State Roads: Roadway Segments with LOS F**

State roadway segments operating at an LOS F based on the travel time and delay were compared to that of the capacity analysis for existing and future conditions. All except for 1 of the 11 roadway segments were identified as needing improvements based on capacity through the planning period of 2045. SR 46 from US 17-92 to Holly Ave. was identified as not needing improvements based on capacity. Only two state facilities represented the roadway segments. The roadway segments are listed below.

## **4.2 Capacity Analysis**

The following text summarizes the existing conditions of the roadways within Seminole County that are included in the CFRPM. The count data used for this summary were obtained from the Traffic Counts GIS layer provided on the Seminole County website (Seminole County n.d.). The LOS thresholds are determined by using the FDOT Generalized Service Volume Tables and the Seminole County Comprehensive Plan Transportation Element, and are the applicable measure is included as part of the dataset.

Appendix A includes the Seminole County Average Annual Daily Traffic (AADT) counts, LOS standard for the facility, and calculated LOS for all facilities within the County. This analysis assumes that the effects of the COVID-19 pandemic have subsided, and 2022 traffic conditions represent typical conditions. The future-year volumes were forecasted based on the CFRPM.

All capacities for the V/C ratio projections were determined based on the threshold capacity established by Seminole County. The threshold capacity varies by facility, including LOS D and E. There are also facilities where the capacity is determined to be LOS E plus a percentage of capacity of either 10% or 20%

Seminole County 2045 Transportation Mobility Plan  
Existing Conditions & Future Traffic Forecast Technical Memorandum

---

as determined by policy. Capacities of all existing conditions deficiencies were verified and validated to ensure the accuracy of the capacity analysis and future project considerations.

As indicated in the Existing Conditions and Deficiencies Technical Memorandum, the analysis of the existing conditions (2022) revealed that 18 roadway segments (12 facilities) are over capacity by current County standards. A total of 12 roadway segments (9 facilities) are maintained by the County (Jacobs 2022).

Seven roadway segments are currently over capacity with in-progress or planned capacity improvements. Two additional currently over capacity roadway segments are part of Wekiva Springs Road has been identified as constrained facilities per the Transportation Element of the Seminole County Comprehensive Plan (Seminole County n.d.). This identification applies under the clause that the roadway lies within the Wekiva River Protection Area.

Map 1 – 2022 Volume/Capacity Ratios in Appendix B represents the V/C ratios for roadway segments within the Seminole County network at 0.95 and above.

Table 4-1 summarizes the existing condition characteristics for County roadway segments that are projected to have an LOS F in 2045. Other County roadway segments that do not have an LOS F in 2045, however, currently have an existing condition of LOS F and are summarized in Table 4-2 with the justifications. Seminole Boulevard from I-4 to US 17/92 did not have available data for this analysis.

N/A = Not Available

The County roadway segments listed in Table 4-2 were initially indicated as segments with existing condition deficiency. However, through the validation process information was required for each of the roadway segments.

**Table 4-2. 2022 County LOS F with V/C Ratios with no Forecasted Deficiency – County Roads**

Roadway	From	To	Lanes	County LOS	V/C Ratio
CR 419	SR 434	Reed Ave.	2	F	1.20
CR 419	Reed Ave.	Lockwood Blvd.	2	F	1.03
Wekiva Springs Rd.	Hunt Club Blvd.	Fox Valley Dr.	2	F	1.26

The following facilities were not included in Table :

- **CR 419: SR 434 to Reed Ave.** The widening of the roadway is currently actively under construction. The capacity for the future conditions was manually adjusted to reflect the capacity improvements. Therefore, the LOS F does not carry beyond the 2022 analysis.
- **CR 419: Reed Ave. to Lockwood Blvd.** The widening of the roadway is currently actively under construction. The capacity for the future conditions was manually adjusted to reflect the capacity improvements. Therefore, the LOS F does not carry beyond the 2022 analysis.
- **Wekiva Springs Rd.: Hunt Club Blvd. to Fox Valley Dr.** The 2022 traffic counts indicated that the roadway segment was over capacity. However, the projected CFRPM counts did not indicate that this roadway segment was over capacity. The roadway segment is forecasted to operate at LOS E with a V/C of 0.94. This roadway segment is also policy-constrained and has not been recommended for capacity improvements based on this constraint.

N/A = Not Available

The state roadway segment listed in Table 4-4 was initially indicated as a segment with an existing condition deficiency. However, through the validation process, information was required for each of the roadway segments.

**Table 4-4. 2022 County LOS F with V/C Ratios with no Forecasted Deficiency – State Roads**

Roadway	From	To	Lanes	County LOS	V/C Ratio
SR 426	Winter Springs Blvd.	SR 434	2	F	1.10

This facility was not included in Table 4-3 for the following reasons:

Seminole County 2045 Transportation Mobility Plan  
Existing Conditions & Future Traffic Forecast Technical Memorandum

---

- **SR 426: Winter Springs Blvd. to SR 434.** The widening of the roadway is currently actively under construction. The capacity for the future conditions were manually adjusted to reflect the capacity improvements. Therefore, the LOS F does not carry beyond the 2022 analysis.

## 5. Future-Year Roadway Capacity Analyses

This section describes the future-year roadway network capacity analyses within Seminole County using the CFRPM. The horizon periods included in this section were 2030, 2035, and 2045. The future-year volumes were forecasted based on the CFRPM output. The CFRPM has a base year of 2015, therefore, the model does not account for any effects of the COVID-19 pandemic.

The CFRPM output was used to generate future-year count data. The LOS thresholds are determined using FDOT Generalized Service Volume Tables or the Seminole County Comprehensive Plan Transportation Element and are included as part of the dataset. The CFRPM output counts, LOS standard for the facility, and calculated LOS are provided for all facilities within the County as part of Appendix A.

All capacities were determined for the V/C ratio based on the threshold capacity established by the County. Capacities of all future condition deficiencies were verified and validated to ensure the accuracy of the capacity analysis.

It is also important to note that FDOT has recently completed the I-4 Ultimate Project in Seminole County from the Orange County Line to SR 434. While the corresponding segments of the interstate are not constrained by County policy, it is reasonable to conclude that the typical section of the interstate will not be expanded within the 2045 horizon year within these areas. The capacity deficiencies are still noted within the future-year analyses.

### 5.1 2030 Capacity Analysis

The analysis of the future conditions in 2030 revealed that 40 roadway segments (22 facilities) are over capacity by current Seminole County standards. A total of 23 of these roadway segments (17 facilities) are maintained by the County.

Two roadway segments that are expected to be over capacity by 2030 are identified as "constrained facilities" per the Transportation Element of the Seminole County Comprehensive Plan (Seminole County n.d.). There are four roadway segments that are currently over capacity and will continue to be by 2030 without the implementation of previously planned and documented capacity improvements. There are 13 roadway segments that will be over capacity by 2030 without the implementation of previously planned and documented capacity improvements. Map 2 – 2030 Volume/Capacity Ratios in Appendix B represents the Countywide ratios for roadway segments at 0.95 and above.

Table 5-1 summarizes forecasted 2030 conditions on Seminole County roadway segments that have an LOS F in 2045.

## 5.2 2035 Capacity Analysis

The analysis of the future conditions in 2035 revealed that 54 roadway segments (26 facilities) are over capacity by current Seminole County standards. A total of 28 of these roadway segments (18 facilities) are maintained by the County.

Four roadways segments that are over capacity by 2035 are identified as constrained facilities per the Transportation Element of the Seminole County Comprehensive Plan (Seminole County n.d.). There are four roadway segments that are currently over capacity and will remain so by 2035 without the implementation of previously planned and documented capacity improvements. There are 17 roadway

 Existing Conditions & Future Traffic Forecast Technical Memorandum

---

segments that will be over capacity by 2035 without the implementation of previously planned and documented capacity improvements. Map 3 – 2035 Volume/Capacity Ratios in Appendix B represents the Countywide ratios for roadway segments at 0.95 and above.

Table 5-3 lists forecasted 2035 conditions on Seminole County roadway segments that have an LOS F in 2045.

### 5.3 2045 Capacity Analysis

The analysis of the future conditions in 2045 revealed that 95 roadway segments (36 facilities) are over capacity by current Seminole County standards. A total of 49 of these roadway segments (27 facilities) are maintained by the County.

Seven roadways segments that are over capacity by 2045 are identified as constrained facilities per the Transportation Element of the Seminole County Comprehensive Plan (Seminole County n.d.). One over capacity roadway segment is part of Wekiva Springs Road, which lies within the Wekiva River Protection

Seminole County 2045 Transportation Mobility Plan  
Existing Conditions & Future Traffic Forecast Technical Memorandum

---

Area. There are four roadway segments that are currently over capacity and will remain so by 2045 without the implementation of previously planned and documented capacity improvements. There are 21 roadway segments that will be over capacity by 2045 without the implementation of previously planned and documented capacity improvements. Map 4 – 2045 Volume/Capacity Ratios in Appendix B represents the Countywide ratios for roadway segments at 0.95 and above.

Table 5-5 lists future conditions on Seminole County roadway segments that have an LOS F in 2045.

## 6. Future Roadway Capacity Deficiencies

This section summarizes the overall future roadway capacity deficiencies. When the future years of 2030, 2035, and 2045 are considered, there is a significant roadway capacity deficiency in Seminole County. With a Countywide network of 311 roadway segments, approximately 30.5% of the roadway segments are expected to operate at an LOS F by 2045.

Table 6-1 summarizes the progression of future condition LOS for the County and state roadways networks. Both the County and the state roadway networks showed a forecast of a relatively even distribution of LOS in the future years, with some exceptions as noted in the following text.

The County roadways showed a decrease in LOS C during the future years, with these shifting toward lower LOS of D, E, and F. The LOS D and E remained approximately unchanged through 2035 and 2045. LOS F more than doubled, increasing from 23 roadway segments in 2030 to 49 roadway segments in 2045.

State roadways showed a consistent number of LOS B roadway segments during the future years. The number of state roadway segments with LOS C decreased by 20 compared to the County roadway segments (which decreased by 32). State facilities also shifted to the lower LOS of D, E, and F. Unlike the County roadway segments, state roadway segments with LOS D and E showed significant decreases. However, state roadway segments with LOS F more than tripled, increasing from 14 roadway segments in 2030 to 46 roadway segments in 2045.

**Table 6-1. 2030, 2035, and 2045 County LOS Summary**

LOS	County Road Segments			State Road Segments		
	2030	2035	2045	2030	2035	2045
A	0	0	0	0	0	0
B	0	0	0	5	5	4
C	138	124	106	52	44	32
D	48	57	52	12	8	7
E	8	8	10	11	17	5
F	23	28	49	14	20	46

Table 6-2 summarizes the distribution of the 2045 LOS for County and state roadway segments. Even with the significant increases in LOS F for County roadway segments, it is still only the third highest LOS, with 22.6% of roadway segments. However, 48.9% of state roadway segments are performing at LOS F, which makes it the highest for these facilities.

**Table 6-2. 2045 County Levels of Service Summary**

County Roads		State Roads		
LOS	Segments	% of Total	Segments	% of Total
A	0	0.0%	0	0.0%
B	0	0.0%	4	4.3%
C	106	48.8%	32	34.0%
D	52	24.0%	7	7.5%
E	10	4.6%	5	5.3%
F	49	22.6%	46	48.9%
<b>Totals</b>	<b>217</b>	<b>100.0%</b>	<b>94</b>	<b>100.0%</b>
